DETAILED ACTION

Election/Restrictions

1. Claims 8-10 and 13-16 are allowable. The restriction requirement as set forth in the Office action mailed on 11/28/06 has been reconsidered in view of the allowability of claims to the elected invention pursuant to MPEP § 821.04(a). **The restriction requirement is hereby withdrawn as to any claim that requires all the limitations of an allowable claim.** Claims 13-14, directed to non-elected species are no longer withdrawn from consideration because the claim(s) requires all the limitations of an allowable claim.

In view of the above noted withdrawal of the restriction requirement, applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Once a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Drawings

2. Figures 4-5 and 6A-6B should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes

Art Unit: 3676

are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Allowable Subject Matter

3. The following is an examiner's statement of reasons for allowance: Prior art of Phillips teaches an oil ring formed into cross-section substantially of an I-shape that two rails are connected at a columnar portion thereof, a sliding projection formed in each of the two rails comprises an outer side surface of sliding projection which forms an outer portion of the sliding projection, a inner side surface of sliding projection which forms an inner portion of the sliding projection, and a sliding surface which slides on a cylinder inner wall and forms a tip end of the sliding projection, a taper angle of the outer side surface of sliding projection is in a range of 10 to 60 degrees, an outer edge portion, the outer side surface of sliding projection and the sliding surface are joined to each other, is formed into a curved surface, and the sliding surface has a curved surface sliding portion which is joined to the outer side surface of sliding projection and formed into a gently curved surface and the sliding projection has a radial width but fails to teach that the sliding surface is no in symmetry about the center line (shown in figures) and that the radial width is from 3 micro-meters to 100 micro-meters.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
